

6. SSF SECURITY TALK

RESILIENCE AS A KEY SKILL IN
THE EVENT OF A CRISIS

The background of the lower half of the page is a light blue gradient with a complex network of white lines and dots, resembling a globe or a digital network. A large, white, grid-patterned padlock is centered in the middle of this network.

Online Conference

RESILIENCE AS A KEY SKILL IN THE EVENT OF A CRISIS

Dear guests

In the VUCA world (Volatility, Uncertainty, Complexity, Ambiguity), the reports of malfunctions and faults with critical services / infrastructures are multiplying. The causes are often unforeseeable, occur surprisingly and therefore have far-reaching consequences.

The findings are clear: Classic risk management and individual measures cannot guarantee the survival of networked systems. This applies to companies as well as to the operators of critical infrastructures, to authorities, public safety organizations and the armed forces.

Resilience as a safety concept provides the answer to increasingly complex damage scenarios. Strong resilience cushions the negative consequences of faults, irrespective of the trigger. It reduces the duration and intensity of performance failures. This minimizes reputational damage and creates a competitive advantage.

We invite you to discuss resilience as a security concept with experts on September 10, 2020.

- a) What is the difference between «resilience» and classic risk management?
- b) Why is technical resilience only half-way?
- c) What are the areas of application for resilience as a security concept?
- d) How can private and public organizations become more resilient efficiently?

We are looking forward to welcoming you!

Hans-Jürg Käser
President SSF

PROGRAM

- 4.30 p.m. Welcome
Hans-Jürg Käser, President of SWISS SECURITY FORUM
- Resilience as an answer to the question of complexity
Benjamin Scharte, Center for Security Studies, ETH Zurich
Head of the Risk and Resilience Research Team
- Resilience as a safety concept for organizations
Dr. Adrian Marti, AWK Group
Partner
- Case 1: Resilience in the Swiss Armed Forces as a sociotechnical system
Dr. Martin Krummenacher, Armed Forces Staff
KPM Doctrine Research and Development
- Case 2: Resilient university network and DNS infrastructure for .ch
Martin Leuthold, SWITCH
Head of Division „Security & Network“
- Case 3: Technological resilience in the financial sector
Sandra Hauser, Zurich Schweiz
Head Transformation & Technology, Member of the Executive Board
- 5:30 p.m. Panel Discussion
Moderation: Fredy Müller, Managing Director SSF
Participants: Judith Bellaïche, National Councillor GLP, ZH;
and the remaining speakers
- Closing words
Oliver Spiess, AWK Group
Partner
- 6:00 p.m. End of the online conference
